

ANS 13: Invalid Object name 'xyz' – this error occurs because in the DSN either the wrong database is selected or database is not selected at all.

- To clear this error, open the ODBC Window from Control Panel (See Answer 6)
- Select the DSN created for SOUL 2.0 and click on Configure

- Click Next until you see the following window i.e. Screen No 3

- Select the proper database name from here
- Click Next
- Click Finish
- Click Test Data Source
- Click OK
- Click OK
- Click OK
- Open the SOUL 2.0 Application again and select the DSN Configured.
